

Case Study

Streamlining Ergonomics for a High Tech Company

Client Overview:

For over 17 years, Erogarts has partnered with a prominent High Tech company in California and Oregon, providing specialized ergonomic consultancy services.

Challenge:

The company's Environmental Health and Safety (EHS) department was overwhelmed with tasks, seeking to delegate some of their responsibilities to enhance efficiency. The EHS team needed a reliable partner to manage ergonomic evaluations and related duties, creating bandwidth for other critical tasks.

Solution:

Erogarts stepped in with a comprehensive ergonomic management strategy:

Ergonomic Evaluations: We took over the entire process of ergonomic evaluations, from receiving requests to conducting assessments. This not only streamlined the workflow but also ensured timely and professional evaluations for office workers.

End-to-End Ergonomic Management: Our role expanded to encompass all aspects of the ergonomic process. This included scheduling evaluations, writing detailed reports, communicating with employees and their managers, ordering necessary ergonomic products, and handling facility requests for ergonomic improvements.

Follow-Up and Support: We partnered with EHS management to create a follow-up system to ensure employees received and correctly used the ergonomic products, maintaining a safe and efficient work environment.

Integration into EHS Program: Our seamless integration into the company's EHS program meant that when a new EHS manager was hired, ergonomics was completely managed by Erogarts, significantly reducing the workload on the EHS department.

Broadening Scope: Beyond office ergonomics, we also tackled industrial ergonomic challenges in clean rooms, including researching and procuring specialized chairs and ergonomic tools, further demonstrating our versatility and expertise.

Results:

The partnership yielded significant benefits:

Efficiency Boost:

The EHS department experienced a substantial reduction in workload, allowing them to focus on other essential tasks.

Seamless Integration:

Erogarts became an integral part of the company's EHS program, handling all ergonomic-related issues with minimal need for oversight.

Expanded Capabilities:

Our involvement in diverse ergonomic areas, from office to industrial settings, showcased our ability to adapt and provide comprehensive solutions.

“

“Wish everyone I worked with was as easy to work with as Serafine”

Chad O.

Conclusion:

This case study exemplifies Erogarts' ability to provide end-to-end ergonomic solutions, seamlessly integrating into existing corporate structures and significantly enhancing operational efficiency. Our partnership with the High Tech company demonstrates our commitment to delivering tailored ergonomic solutions that meet and exceed client expectations.
